with a third then they are in thermal equilibrium with each other. We can discover an important property of thermal equilibrium by considering three systems, A, B, and C, that initially are not in thermal equilibrium. We separate systems A and B with an adiabatic wall (ideal insulating material), but we let system C

What is Thermodynamic Property -
Definition

The equality of temperature is the only requirement for thermal equilibrium. The zeroth law of thermodynamics states that if

two bodies are in thermal equilibrium with a third body, they are also in thermal equilibrium with each other. It may seem silly that such an obvious fact is called one of the basic laws of thermodynamics.
