The flatness of the universe is one of the main pointers to the era of the very rapid expansion of the universe, described by the inflationary model. For example, at the time of the big bang, the Universe could have a very large curvature, while now, according to the CMB data, it is known that the universe is flat. The inflationary expansion makes it flat in the entire observed space (meaning, of course, large scales at which the curvature of space by stars and galaxies is not significant ...
